

Figure 7. Feedstock Suppliers To Sulphate Process Pigment Plants

4.3 Increasing Australian Production

In 1990 when Cooljarloo production reaches the market and Australian production will account for 68% of secondary ilmenite production, 67% of synthetic rutile production and 67% of natural rutile production. (These figures are nett production figures, i.e. ilmenite production of 440,000 tpa from Cooljarloo is adjusted down by 210,000 tonnes used in synthetic rutile production feedstock).
