

## Torino and its province

The province of Torino ranks third in Italy by number of companies and is in the second position in the construction sector. With its services provided as important contributors to the national results in GDP the GDP in the province was the same of a country like Croatia. Its main contribution are the extremely growing service sector as well as industrial and highly skilled manufacturing sectors.

Despite the global recession, Torino is very likely to recover and tend to build its base on high innovative sectors like software technology, biotechnology and renewable energy sectors as well as through banking of its industrial strength points, i.e. resources and infrastructure.

Torino can also focus on excellent graduate and post graduate educational offer with a growing creative industry. The implementation of the high speed railway line within the city close to the European production and will help to promote new growth opportunities.
