

Edit custom module theme/islandora-solr-custom.tpl.php to customize search results

```
nano -w /usr/share/demo.bess-piemonte.it/sites/all/modules/
islandora_solr_custom/theme/islandora-solr-custom.tpl.php [8.2.5]

...
<?php $modello = $result['rels.hasModel']['value']; ?>.
<?php if ($modello == "info:fedora/islandora:pageCModel"):?>
...
<?php elseif ($modello == "info:fedora/islandora:bookCModel"): ?>
...
<?php endif; ?>
```

Add code to custom module theme/islandora\_solr\_custom.theme.inc to extract highlight word as full-text result search

```
nano -w /usr/share/demo.bess-piemonte.it/sites/all/modules/
islandora_solr_custom/theme/islandora_solr_custom.theme.inc [8.2.6]

...
$hl=$variables['results_raw']->highlighting;
// go over each search result object
foreach ($variables['results_raw']->response->docs as $doc) {
    $resultsArray = array();
    // go over each field within a search result object
    foreach ($db_values as $db_value) {
        $field = $db_value['field'];
        if (isset($doc->$db_value['field'])) {
            $value = $doc->$db_value['field'];
            if (is_array($value)) {
                $value = implode(" ", $value);
            }
            if ($field!="OCR.OCR") {
                $resultsArray[$field]['value'] = $value;
            }
        }
        else {
            $resultsArray[$field]['value'] = '';
        }
    }
    if ($field=="PID") {
        $hlv = $hl->$value;
        foreach ($hlv as $singlef) {
            $linee = "";
            foreach ($singlef as $linea) {
                $linee = $linee."... ".$linea."... <br>";
            }
            $resultsArray['OCR.OCR']['value'] = $linee;
        }
    }
}
...
```
